I am trying to make the submission easier, so (Claude &I) wrote a tool for you to check before you actually submit your zip file with whatever we asked for.

Download check_submission.sh
run it with 'bash check_submission.sh your_submission.zip' . This should work in linux/max/windows.
The script will pull a docker image I built for it.

This is still Work In Progress. When you hit a bump, please email me <<<.
